

# CUSTOM FABERKIN ROLLER CURTAINS

**Roller Curtains** are ideal when the area around the lift has space restrictions and there is not room for an accordion skirt. We recommend that there is ample area at the base for mounting the roller allowing enough room for the working area.

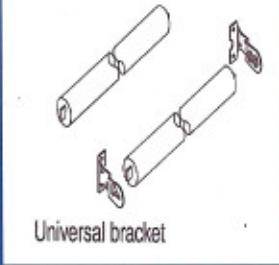

The steel roller contains a strong internal spring, which maintains tension keeping the curtain taut and positioned correctly while the table is in motion.

Heavy Duty 23 oz coated vinyl fabric is standard. Curtains can also be made with Hypalon and Neoprene fabrics, providing maximum protection in any environment.

The diameter of the roller is determined by the width of the area to be covered and by the extension.

The roller is mounted on the base of the floor with strong steel brackets, and the curtain is attached to the platform edge by a small flat bar.

We recommend that roller curtains are used for inside applications only.
